Meet the penguins

The penguins data from the palmerpenguins package (Horst, Hill, and Gorman 2022) contains size measurements for 344 penguins from three species observed on three islands in the Palmer Archipelago, Antarctica.

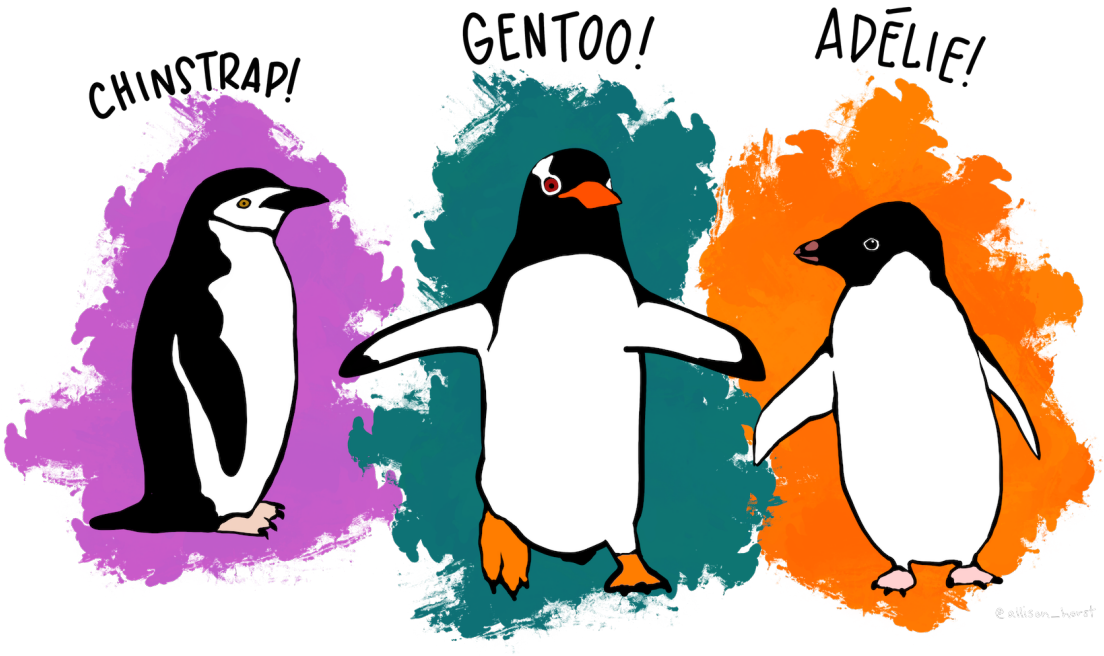

Figure 1: penguins

The Penguin dataset took inspiration from the Isis dataset, which Mithy et al. (2022) states is one of the most famous datasets.

Results

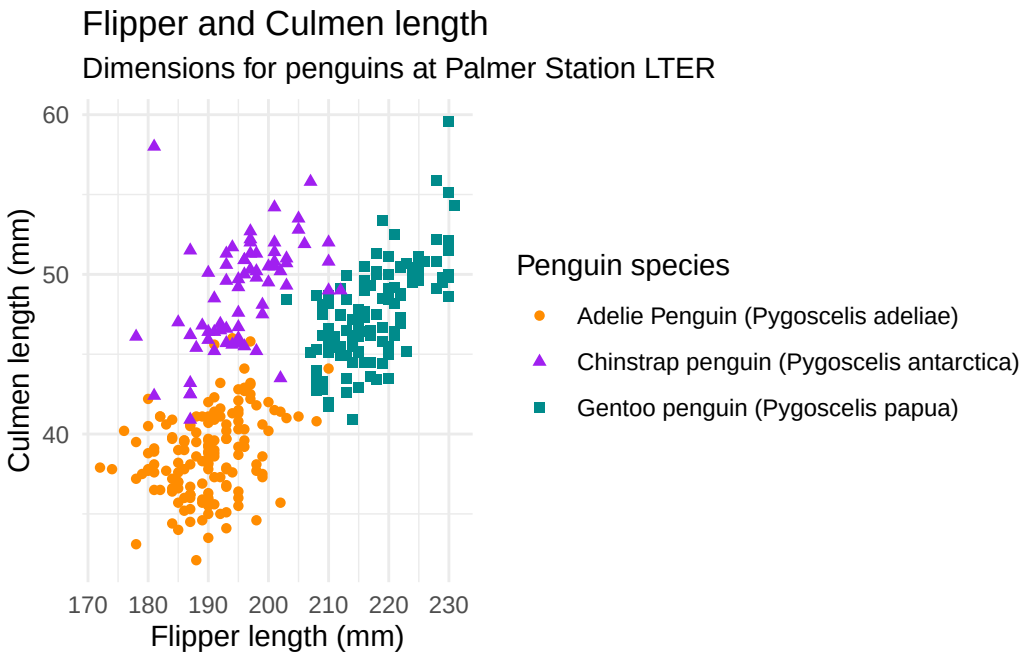

Figure 2: Figure of Flipper vs Culman length

The above plot is very interesting. It shows that there are clearly more than 50 penguins in this dataset, more specifically there are 344 penguins in total! From this total there are 124 Gentoo species of penguins and 68 Chinstrap within the data.

Import a Script

```
do_addition <- function(number1, number2){

        # Check that arguments provided are numberic
        if(class(number1) != "numeric" | class(number2) != "numeric"){
                print("Error: one or more of your inputs are not numeric")

        # Perform simple addition and return the result
        } else{
                result <- number1 + number2
                return(result)
```

```
        }
}
```

```
do_addition(22,33)
```

```
